Assignment

Biological Databases Website

This project aims to create a web page that serves as a comprehensive resource, listing biological databases of your choice. The HTML page must include the following:

- An example of each one of the following databases:
 - A DNA database
 - A Gene expression database
 - A Genome database
 - A Phenotype database
 - A Radiologic database
- A stylesheet file.
- A tile
- A brief description of your website.
- An HTML table that lists all the databases with the following requirements:
 - The table must be centered and have gridlines.
 - A header indicating the names of each attribute.
 - The header must have a different background color than the body of the table.
 - A list of attributes:
 - Database name and the name must be a hyperlink to the database.
 - Brief description (two or three sentences)
 - An image icon of the database displayed at 100px width size.
